
Mitigation Monitoring and Reporting Program

California Public Resources Code Section 21081.6 requires that, upon certification of an EIR, “the public agency shall adopt a reporting or monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment. The reporting or monitoring program shall be designed to ensure compliance during project implementation.”

This chapter contains the mitigation monitoring and reporting program (MMRP) that has been developed for the McCullough-Victorville Transmission Lines 1 and 2 Upgrade Project (Project or proposed Project). This MMRP has been developed in compliance with Public Resources Code Section 21081.6 and Section 15097 of the CEQA Guidelines. The Mitigation Measures in the table are coded by alphanumeric identification consistent with the EIR. The following items are identified for each Mitigation Measure:

- **Monitoring.** This section of the MMRP lists the stage of the proposed Project during which the Mitigation Measure would be implemented and the stage during which proper implementation would be monitored and verified. It also lists the agency that is responsible for ensuring that the Mitigation Measure is implemented and that it is implemented properly.
- **Verification of Compliance.** This section of the MMRP provides a location for the implementing party and/or enforcing agency to make notes and to record their initials and the compliance date for each Mitigation Measure.

This MMRP shall be enforced throughout all phases of the Project. After review and approval of the final MMRP by the Lead Agency, minor changes and modifications to the MMRP are permitted, but can only be made by Lead Agency approval. The Lead Agency, in conjunction with any appropriate agencies or departments, will determine the adequacy of any proposed change or modification. This flexibility is necessary in light of the nature of the MMRP and the need to protect the environment with a workable program. No changes will be permitted unless the MMRP continues to satisfy the requirements of CEQA, as determined by the Lead Agency.

Mitigation Monitoring and Reporting Program for the McCullough-Victorville Transmission Lines 1 and 2 Upgrade Project

| Mitigation Measure | Monitoring/Reporting | | | Verification of Compliance | | |
|---|----------------------|---|-------------------------------------|----------------------------|------|----------|
| | Phase | Method | Enforcing/ Responsible Agency | Initial | Date | Comments |
| Air Quality | | | | | | |
| <p>MM-AQ-1. Fugitive Dust Controls. Comply with all applicable Rules and Regulations of the Mojave Desert Air Quality Management District (MDAQMD), including, but not limited to Rules 401 (Visible Emissions), 402 (Nuisance), and 403 (Fugitive Dust). To ensure compliance with these Rules and Regulations, the Project Applicant or successor in interest shall prepare and submit a Dust Control Plan to the MDAQMD for approval. The Dust Control Plan shall document the best management practices (BMPs) that will be implemented during Project construction to prevent, to the maximum extent practicable, wind and soil erosion. BMPs that will be included in the Dust Control Plan shall include, but are not limited to, the following:</p> <ul style="list-style-type: none"> ▪ Signage compliant with Rule 403 (Attachment B) shall be erected at each Project site entrance prior to the commencement of construction. ▪ Use a water truck to maintain moist disturbed surfaces and actively spread water during earthwork to minimize visible fugitive dust emissions. If the Project site has exposed sand or fines deposits, or if the Project exposes such soils through earthmoving, chemical stabilization or covering with a stabilizing layer of gravel will be required to eliminate visible dust/sand from the sand/fines deposits. | During construction | Compliance with Rule 401, Rule 402, and Rule 403 with signage, use of water trucks, limiting of vehicle speeds, installation of perimeter fencing, use of dust suppressants, and obtaining permits for equipment use. | LADWP, MDAQMD | | | |

Mitigation Monitoring and Reporting Program for the McCullough-Victorville Transmission Lines 1 and 2 Upgrade Project

| Mitigation Measure | Monitoring/Reporting | | | Verification of Compliance | | |
|--|----------------------|--------|-------------------------------------|----------------------------|------|----------|
| | Phase | Method | Enforcing/ Responsible Agency | Initial | Date | Comments |
| <ul style="list-style-type: none"> ▪ All vehicle speeds on unpaved roads shall be limited to 15 miles per hour. ▪ All perimeter fencing shall be wind fencing or the equivalent, to a minimum of four feet of height or the top of all perimeter fencing. The Project Applicant shall maintain the wind fencing as needed to keep it intact and remove windblown dropout. This wind fencing requirement may be superseded by local ordinance, rule, or Project-specific biological mitigation prohibiting wind fencing. ▪ All maintenance and access vehicular roads and parking areas shall be stabilized with chemical dust suppressants sufficient to eliminate visible fugitive dust from vehicular travel and wind erosion. The Project Applicant shall take actions to prevent Project-related track out onto paved surfaces and clean any Project-related track out within 24 hours. All other disturbed earthen surfaces within the Project area shall be stabilized by natural or irrigated vegetation, compaction, chemical, or other means sufficient to prohibit visible dust from wind erosion. ▪ Obtain MDAQMD permits for any miscellaneous process equipment that may not be exempt under MDAQMD Rule 219 including, but not limited to, internal combustion engines with a manufacturer's maximum continuous rating greater than 50 brake horsepower. | | | | | | |

| Mitigation Measure | Monitoring/Reporting | | | Verification of Compliance | | |
|--|----------------------|-------------------------------|-------------------------------------|----------------------------|------|----------|
| | Phase | Method | Enforcing/ Responsible Agency | Initial | Date | Comments |
| <p>MM-AQ-2. Exhaust Controls. During Project construction, all internal combustion engines/construction equipment greater than 75 horsepower operating on the Project site shall meet U.S. EPA-certified Tier 4 Final emissions standards. The LADWP and/or its designated construction contractor shall include this requirement in applicable bid documents, purchase orders, and contracts with successful contractors. Successful contractors must demonstrate the ability to supply the compliant construction equipment for use prior to any ground-disturbing and construction activities. An exemption from these requirements may be granted in the event that LADWP and/or its designated construction contractor documents that equipment with the required tier is not reasonably available and corresponding reductions in criteria air pollutant emissions are achieved from other construction equipment.¹ Before an exemption may be considered by LADWP, the LADWP and/or its designated construction contractor shall be required to demonstrate that at least two construction fleet owners/operators in the High Desert and San Bernardino County Region were contacted and that those owners/operators confirmed Tier 4</p> | During construction | Use of Tier 4 final equipment | LADWP | | | |

¹ For example, if a Tier 4 Final piece of equipment is not reasonably available at the time of construction and a lower tier equipment is used instead, other pieces of equipment with engines less than 75 hp could be upgraded to Tier 4 or replaced with an alternative-fueled (not diesel-fueled) equipment to offset the emissions associated with using a piece of equipment that does not meet Tier 4 Final standards.

| Final equipment could not be located within the High Desert and San Bernardino County Region. | | | | | | |
| Biological Resources | | | | | | |
| <p>MM-BIO-1. Western Joshua Tree Census, Permitting, and Avoidance. LADWP shall implement the mitigation measure below.</p> <p><i>Western Joshua Tree Conservation Act Census.</i> In sections of the Project area within which western Joshua tree has been documented (i.e., between L1 156-1 and L2 155-1 to the Victorville Substation), an individual stem or trunk of western Joshua tree including dead trees must be mapped by a certified arborist who shall conduct a census within the Project area and a 50-foot buffer (census area) per the Western Joshua Tree Conservation Act census instructions. The certified arborist shall systematically search the entire census area using parallel transects for all western Joshua trees and their locations using high-accuracy (<1-meter [approximately 3-foot]) GPS technology. Additionally, the size class of each tree must be determined based on measurement methods described in the census instructions (i.e., from the middle of the base of the trunk to the top of the leaf that is furthest away from the base for the entire path of growth of the tree). The western Joshua tree height classes are defined as follows: Size Class A = 0-1 meter in height; Class B = 1 meter or greater but less than 5</p> | Prior to start of construction and during construction | Census of Joshua tree, obtain permits, and avoid trees as possible | LADWP, CDFW | | | |

| | Phase | Method | Enforcing/ Responsible Agency | Initial | Date | Comments |
| <p><i>Western Joshua Tree Conservation Act Permitting.</i> If it is determined that certain western Joshua tree individuals cannot be avoided, the Project shall apply for a Western Joshua Tree Conservation Act Incidental Take Permit (ITP) by which mitigation for take of western Joshua trees would be fulfilled through payment of the elected fees as described in California Fish and Game Code Section 1927.3 and relocation efforts deemed appropriate by CDFW pursuant to Section 1927.3, subdivision (a)(4)(A) of the California Fish and Game Code. In conformance with the reduced fee schedule prescribed for the Project area, mitigation will consist of payment of \$1,000 for each western Joshua tree five meters or greater in height, \$200 for each western Joshua tree less than five meters but greater than 1 meter in height; and \$150 for each western Joshua tree less than 1 meter in height.</p> <p>Other local regulations (i.e., City of Victorville Municipal Code, Chapter 13.33 and San Bernardino County Development Code Chapter 88.01) also require permitting or notification prior to removal of western Joshua trees. Therefore, the Project must also receive written consent from the City of Victorville’s Director of Parks and Recreation prior to the removal or relocation of western Joshua trees located within the City of Victorville in accordance with City of Victorville Municipal Code, Chapter 13.33,</p> | | | | | | |

| <p>MM-BIO-3. Biological Monitoring. At minimum, biological monitoring shall include the following tasks and responsibilities:</p> <ul style="list-style-type: none"> • The Authorized biologist(s) and/or monitor(s) shall be on site daily during Project activities to conduct compliance inspections to prevent unauthorized take of Mojave desert tortoise, Mojave ground squirrel, and western Joshua tree, bighorn sheep, desert kit fox, burrowing owl, or golden eagle. • Enforcement of biological mitigation measures, permit conditions, and protective measures associated with Project approvals. • Ensure that signs, stakes, and fencing are intact. • Ensure that Project activities are only occurring within the direct impact footprint. • Inspect all open holes and trenches daily and just prior to back-filling or covering. At the end of each workday, LADWP shall place an escape ramp at each end of trenches to allow any animals that may have become trapped in the hole or trench to climb out overnight. The ramp may be constructed of either dirt fill or wood planking or other suitable material that is placed at an angle no greater than 30 degrees. If any worker discovers that special-status wildlife has become trapped, they shall notify the LADWP construction manager and environmental project manager immediately and LADWP | During construction | Authorized biologist shall be on site conducting monitoring | LADWP, CDFW | | | |

|---|--------------------------------|---|-------------------------------------|----------------------------|------|----------|
| | Phase | Method | Enforcing/ Responsible Agency | Initial | Date | Comments |
| implement best available control measures to reduce dust. Examples of such best available control measures include periodic watering of work areas, application of environmentally safe soil stabilization materials, and/or roll compaction (also required by MM-AQ-1 – Fugitive Dust Controls). | | | | | | |
| MM-BIO-4. Education Program. LADWP shall conduct an education program prior to all Project activities for all employees, agents, or contractors that will be working on behalf of the LADWP in the Project Area. The education program shall include a discussion of the biology and general behavior of desert tortoise and Mohave ground squirrel and the biology of western Joshua tree; information about the distribution and habitat needs of the species; sensitivity of the species to human activity; the legal status of the species under CESA, including their protected status, recovery efforts, penalties for violations; and Project-specific protective measures detailed in the ITP. The education program shall consist of an in-person presentation from the Authorized Biologist or Biological Monitor and/or a digital presentation that can be accessed in the field via cellular phones, tablets, laptop computers, and/or similar portable devices. LADWP shall prepare and distribute wallet-sized cards or a fact sheet handout (hard copy or digital) detailing the information presented during the education | Prior to start of construction | Conduct education program to discuss the sensitive and protected biological resources in the Project area | LADWP, CDFW | | | |

| <p>program for workers to carry in the Project Area. In addition, a tail-gate presentation prior to surface-disturbing Project activities shall also be presented by the Authorized Biologist or Biological Monitor prior to the start of any project-specific Project activities to identify specific on-site resources identified for avoidance during pre-activity surveys. For the education program and each tailgate presentation, LADWP shall provide interpretation for non-English speaking workers, and the same instruction shall be provided to any new workers before they are authorized to perform work in the Project Area. Upon completion of the program and after each tail-gate presentation, employees shall sign a form (hard-copy or digital) stating they attended the program and presentation and understand all protection measures. The form shall be made available to CDFW upon request. The program shall:</p> <ul style="list-style-type: none"> • Be developed by or in consultation with the Authorized Biologist and consist of an on-site presentation with supporting written material and/or electronic media, including photographs of special-status species, available to all participants. • Provide an explanation of the function of flagging that designates authorized work areas or resources marked for avoidance and specify the prohibition of soil disturbance or vehicle travel outside designated areas. | | | | | | |

| distances from proposed work areas, visual or acoustic barriers, and existing level of disturbance to avoid impacts to nesting birds, eggs, and nests. The biologist shall establish an appropriate nest buffer based on the species and the planned activity's level of disturbance, site conditions, and the observed bird behavior. The on-site biologist shall increase buffer sizes as needed if nesting individuals show signs of disturbance. The buffer zone may be decreased, at the biologist's discretion, based on the individual's sensitivity to visual or audible disturbances but shall not be decreased below 300-feet for special-status avian species or raptor species. The nest buffer area shall be avoided and demarcated in the field with flagging and stakes or construction fencing. Active nests shall be monitored until the biologist has determined the young have fledged or the project is finished. The biologist has the authority to halt or stop work if nesting individuals exhibit signs of disturbance. Established buffers shall remain until the biologist determines the young have fledged or the nest is no longer active, or until Project activities cease. | | | | | | |
| MM-BIO-10. Crotch's Bumble Bee Protocol Survey and Avoidance. During candidacy or if Crotch's bumble bee is listed under CESA, LADWP shall implement the mitigation measure below. | Prior to start of construction and during construction | Presence/absence surveys for the species shall be conducted prior to construction. A written survey report shall be submitted to CDFW | LADWP, CDFW | | | |

| | Phase | Method | Enforcing/ Responsible Agency | Initial | Date | Comments |
| <p>Within the known distribution range for Crotch’s bumble bee, presence/absence surveys for the species shall be conducted prior to construction within the time periods described below in order to evaluate locations and use of Crotch’s bumble bee nesting colonies if present within the Project area. The survey shall include 1) a habitat assessment and 2) focused surveys, both of which will be based on recommendations described in the “Survey Considerations for CESA (California Endangered Species Act) Candidate Bumble Bee Species,” released by the CDFW on June 6, 2023, or the most current at the time of construction. LADWP will submit a survey plan prior to conducting focused surveys, which will identify the Project and its location, survey methods, lead surveyors, field assistants. The habitat assessment shall be conducted prior to focused surveys and, at a minimum, include a review of historical and current species occurrences; document potential habitat on site including foraging, nesting, and/or overwintering resources; and identify which plant species are present. For the purposes of this mitigation measure, nest resources are defined as abandoned small mammal burrows, bunch grasses with a duff layer, thatch, hollow trees, brush piles, and man-made structures that may support bumble bee colonies such as rock walls, rubble, and furniture. If nesting resources are present in the impact area, focused surveys will be conducted.</p> | | <p>within 30 days of the survey.</p> | | | | |

|--|----------------------|--------|-------------------------------------|----------------------------|------|----------|
| | Phase | Method | Enforcing/ Responsible Agency | Initial | Date | Comments |
| <p>The focused surveys will be performed by a biologist with expertise in surveying for bumble bees and include at least three survey passes that are not on sequential days or in the same week, preferably spaced two to four weeks apart. The timing of these surveys shall coincide with the Crotch’s bumble bee colony active period (April 1 through August 31). Surveys may occur between 1 hour after sunrise and 2 hours before sunset. Surveys will not be conducted during wet conditions (e.g., foggy, raining, or drizzling) and surveyors will wait at least 1 hour following rain. Optimal surveys are when there are sunny to partly sunny skies that are greater than 60 degrees Fahrenheit. Surveys may be conducted earlier if other bees or butterflies are flying. Surveys shall not be conducted when it is windy (i.e., sustained winds greater than 8 mph). Within non-developed habitats, the biologist shall look for nest resources suitable for bumble bee use. Ensuring that all nest resources receive 100% visual coverage, the biologist shall watch the nest resources for up to five minutes, looking for exiting or entering worker bumble bees. Worker bees should arrive and exit an active nest site with frequency, such that their presence would be apparent after five minutes of observation. If a bumble bee worker is detected, then a representative shall be identified to species. Biologists should be able to view several burrows at one time to sufficiently determine if bees are</p> | | | | | | |

| Mitigation Measure | Monitoring/Reporting | | | Verification of Compliance | | |
|---|----------------------|--------|-------------------------------------|----------------------------|------|----------|
| | Phase | Method | Enforcing/ Responsible Agency | Initial | Date | Comments |
| <p>entering/exiting them depending on their proximity to one another. It is up to the discretion of the biologist regarding the actual survey viewshed limits from the chosen vantage point which would provide 100% visual coverage; this could include a 30- to 50-foot-wide area. If a nest is suspected, the surveyor can block the entrance of the possible nest with a sterile vial or jar until nest activity is confirmed (no longer than 30 minutes).</p> <p>Identification will include trained biologists netting/capturing the representative bumble bee in appropriate insect nets, per the protocol in U.S. National Protocol Framework for the Inventory and Monitoring of Bees. The bee shall be placed in a clear container for observation and photographic documentation if able. The bee will be photographed using a macro lens from various angles to ensure recordation of key identifying characteristics. If bumble bee identifying characteristics cannot be adequately captured in the container due to movement, the container will be placed in a cooler with ice until the bumble bee becomes inactive (generally within 15 minutes). Once inert, the bumble bee shall be removed from the container and placed on a white sheet of paper or card for examination and photographic documentation. The bumble bee shall be released into the same area from which it was captured upon completion of identification. Based on implementation of this</p> | | | | | | |

| <p>method on a variety of other bumble bee species, they become active shortly after removal from the cold environment, so photography must be performed quickly.</p> <p>If Crotch’s bumble bee nests are not detected, no further mitigation would be required. The mere presence of foraging Crotch’s bumble bees would not require implementation of additional minimization measures because they can forage up to 10 kilometers from their nests. If nest resources occupied by Crotch’s bumble bee are detected within the construction area, no construction activities shall occur within 50 feet of the nest, or as determined, by a qualified biologist through evaluation of topographic features or distribution of floral resources. The nest resources will be avoided for the duration of the Crotch’s bumble bee nesting season (February 1 through October 31), which includes the queen flight season, the colony active period, and the daughter-queen (gyne) flight season. Outside of the nesting season, it is assumed that no live individuals would be present within the nest as the gynes usually leave from September through October, and all other individuals (original queen, workers, males) die. The gyne is highly mobile and can independently disperse to surrounding open space areas that support suitable hibernacula resources.</p> | | | | | | |
